

## Ready Seal® Fence Stain

When it comes to fence stains and fence sealers, no two are created equal. This page will show you how staining a fence with Ready Seal® Fence Stain is a better option than fence paints, acrylic fence stains or any of the other numerous fence stains and sealers available today.

## Ready Seal® Fence Stains

Ready Seal® Fence Stain and Sealer for Wood is a penetrating type, semi-transparent stain and sealer in one. It seals out moisture and has a heavy concentration of trans-oxide pigments that provide maximum UV-protection, yet allow the natural characteristics of the wood to show through. We designed Ready Seal® Fence Stain to circumvent the problems associated with all the various formulations of the different coating types listed below.

**Goof  
Proof**

NO LAPS, RUNS, OR STREAKS.

**DURABLE  
AND  
RESILIENT**

No Cracking, Chipping, Flaking or Peeling.

**TRANSOXIDE  
PIGMENT  
PROTECTION**

Enhances natural look and Protects against UV Rays.

**EASY  
UPKEEP**

Clean, Dry and Re-apply. No Sanding. No Stripping.

## READY PRODUCTS

### MANUFACTURERS OF "READY SEAL"

#### About Ready Products:

The President of Ready Products worked most of his life in the construction industry. He used various products attempting to restore and seal exterior surfaces. Frustration with inconsistent and inferior products continually motivated him to seek better cleaners and sealers. Unable to find durable products, he decided to employ an experienced chemist and develop a complete line of quality cleaning and sealing products.

Knowing most products on the market were only coatings, which are exposed to the elements, Ready Products L.L.C. set out to develop penetrating and environmentally safe cleaners and sealers. After extensive testing of domestic and European chemicals, Ready Products L.L.C. has developed products far superior than those sold on the market today.

Ready Products L.L.C. was founded to formulate and manufacture a full line of products for the chemical restoration and protection of exterior wood, concrete and metal. Ready Products offers wood sealers, masonry waterproofing sealers, graffiti removers, mold & mildew removers, degreasers, wood cleaners and much more.

#### About Ready Seal:

1. Exposed wood should be protected from the harsh effects of weather. Most wood sealers on the market today are "multi-purpose". This means wood, brick, stone and concrete are all treated as if each were like the other. "READY SEAL" is specially designed to seal wood and wood only.
2. Exposed wood will turn gray and decay if not protected with "READY SEAL", the only quality wood sealer. "READY SEAL" has mold, mildew, and fungus inhibitors, and also has multiple ultra violet blockers to prevent graying.
3. "READY SEAL" replenishes oils that have been lost due to exposure to the weathering elements.
4. Long lasting water repellence is due to the heavy concentration of paraffinic oils and our unique specially blended deep penetrating resins.
5. "READY SEAL" is environmentally safe and has NO ozone depleting chemicals.
6. Most wood sealers are only coatings. The coatings seal in moisture and fungus. This encourages decay from the inside out and it masks the beauty of the natural wood grain. "READY SEAL" enhances and protects the fence and deck that is the picture frame around your home.
7. Factory trained and certified installers underwrites the dependability and protection of "READY SEAL" for your exposed wood.
8. "READY SEAL" is made with uniquely blended resins, oils and pigments to insure years of satisfaction and protection.

9. Allowing exposed wood to weather and decay is an eyesore, it's costly to replace and an embarrassment to the neighborhood. For only a few cents per square foot, a professional installer can extend the life and natural wood beauty of any type of porous wood. Extending the life of exposed wood saves money and protects our environment by SAVING ANOTHER TREE.

10. Responsible natural resource management is the driving force behind the development of "READY SEAL". Compliance with state and federal V.O.C. requirements and the lack of harmful ozone depleting chemicals allows safe and cost effective protection for exposed wood.

11. "READY SEAL" contains no algae promoting oils such as linseed or other vegetable oils that promote algae and fungus growth on the wood. Most wood sealers on the market today contain inexpensive fillers such as mineral spirits that evaporate into the atmosphere and pollute the air. "READY SEAL" contains only paraffinic oil that penetrates the wood and waterproofs.

12. Most wood sealers are blended to seal against average conditions with a life expectancy of less than one year. "READY SEAL" is blended to seal wood against the harsh conditions of the southwest and will remain beautiful through many long years of sunlight, rain and strong winds.

13. Do not use "READY SEAL" on redwood. Ready Products has designed a special product to be used on redwood called "REDWOOD Only."
